WHAT WE DO

Rich smile is a digital dental treatment planning platform to help dentists achieve the highest level of precision and quality in their clinical work and deliver the most natural, life-like restorations in their daily practice, without the hassle of investing & buying the technology or mastering the concepts.

FACE-OFF WITH NATURE 2

We have created a unique workshop called "Face-off With Nature" to help the dentists who are seeking answers to the question 'how to provide life-like restorations that are indistinguishable from natural teeth.'

The program empowers you with the knowledge of modern world of digital dental tools that have revolutionized esthetic dentistry & rehabilitations.

Until recently, dentists and dental technicians around the globe faced challenges in designing the shape and morphology of restorations that resemble nature, because it was a herculean task that demanded great skill and time, as nature is always ahead of us in the game. Every natural tooth possesses unique shape and morphology, which forms the essence of its beauty, and also makes it challenging to duplicate.

Now with the advent of digital dentistry, nature's library of abundant designs is available to all of us. No longer do we need to use hand skills to reproduce the geometry of natural teeth shapes and morphology.

Rich smile digital dental planning solutions empower you with the natural restorations protocol in your day-to-day practice.

Come, let's copy nature.... literally...!

DAY 1

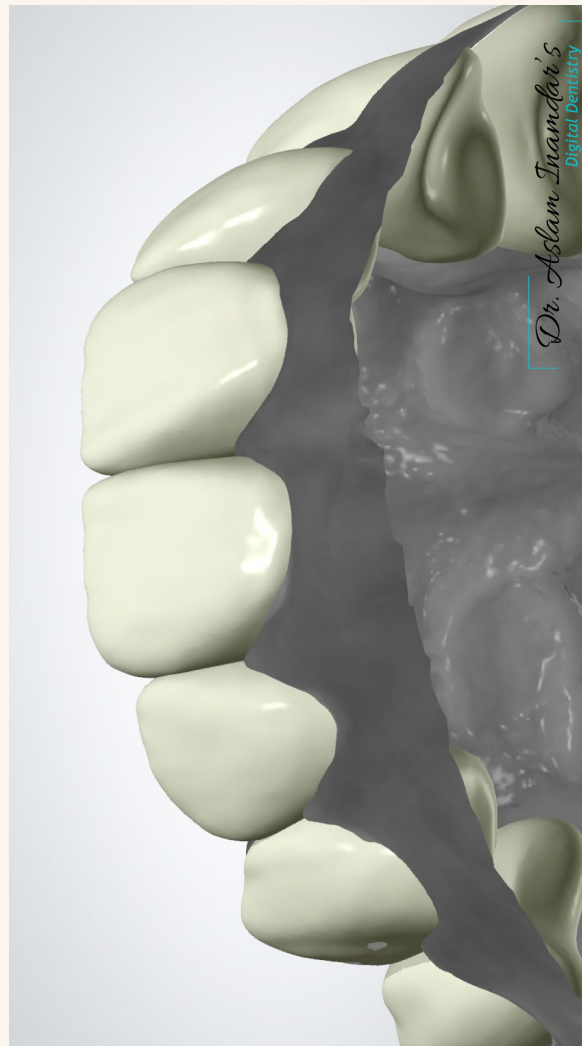

LECTURE 1: 9 TO 10.30 AM

1. Digital Smile Design 2D Planning
2. Digital Smile Design 3D Planning
3. Digital Dentistry tools: Intraoral scanner, 3D printing & more
